WHO IS MACLEAN POWER SYSTEMS?

At **MACLEAN POWER SYSTEMS (MPS)**, we're setting the pace for what's next in utility infrastructure—driven by innovation, speed, and resilience. We deliver customer-inspired, engineered solutions for the construction, upgrade, maintenance, and repair of critical electrical transmission, distribution, and communications infrastructure—supporting the full lifecycle of the grid.

Our comprehensive portfolio includes switches, pole line hardware, insulators, arresters, connectors, anchors, crossarms, and related components—designed with linemen in mind: easy to specify, quick to install, and built to perform in the toughest conditions. From first-response storm restoration to major transmission build-outs, our solutions help utilities and telecom operators reduce operating costs and improve system reliability.

With manufacturing and operations across North America, we deliver industry-leading lead times, uncompromising quality, and the strategic reliability today's grid demands. Built right. Built to last. From engineering expertise to post-install support, MPS is more than a manufacturer—we're a partner you can count on, start to finish.

MacLean Power Systems – LEADING THE WAY™

WHAT WE OFFER

This catalog showcases our core product categories for overhead transmission systems, including:

Conductor Assemblies

Factory-assembled solutions designed for consistent performance and easier installation in the field.

Transmission Insulators

A complete offering of polymer and glass insulators in suspension, line post, braced post, and specialty configurations.

Connection Hardware

Reliable clamps, terminals, splices, and fittings engineered for strength, conductivity, and long-term service.

Conductor Hardware

Spacers, armor rods, and shielding products designed to protect conductors and extend line life.

THE COMPLETE TRANSMISSION SOLUTION

QUALITY PRODUCTS [For Application at High Voltage (HV) & Extra High Voltage (EHV) - AC / DC Designs]

Polymer Insulators

- Suspension
- Line Post
- Braced Post
- Phase Spacers
- Station Class Posts

Toughened Glass

- ANSI 22kip - 50kip
- IEC 300kN - 550kN
- Standard Profile
- RTV Silicone Coated

Hardware

- Connection Hardware
- Conductor Hardware
- Complete Assemblies
- Corona Free Assemblies

Anchoring & Guying

- Structural / Foundation Piles [Helical - Grouted - Micro]
- Guy Strain Assemblies
- Silicone-Coated Guy Strain Insulators

UNMATCHED SERVICE

Support

- Project Initiation - Completion
- Custom Packaging
- Training - Field Support
- Maintenance and Inspection

Engineering

- Load Curve Generation
- E-Field Modeling
- Engineered Solutions
- High Strength Applications

APPLICATION NOTES

Application Notes:

- All assemblies are customizable; If you can't find exactly what you need in the catalog, reach out to transmission@macleanpower.com for immediate support for your project
- Insulator (Item "INS") supplied separately from connection hardware catalog number
- Clamps (Item "CLAMP") supplied separately from connection hardware catalog number
- Additional conductor hardware, such as armor rod, also supplied separately from connection hardware catalog number
- 30K rated hardware assemblies compatible with 25K and 30K insulators
- 50K rated hardware assemblies compatible with 50K insulators
- Insulator section contains all detailed specs and options
- Conductor Hardware section contains all detailed specs and options

CLAMP	LS-RYCI Series	-	HV Suspension Clamp	2	Aluminum Alloy

Application Notes:

- This v-string is designed to fit a 264" vang to vang distance
- Ceramic insulator design is defined as 12 disc strings
- Insulator and clamp are not included in assembly and must be ordered separately
- For other vang to vang dimensions, mark up this assembly and contact transmission@macleanpower.com
- For additional application notes, see page DCA2

APPLICATION NOTES

Application Notes:

- All assemblies are customizable; If you can't find exactly what you need in the catalog, reach out to transmission@macleanpower.com for immediate support for your project
- Insulator (Item "INS") supplied separately from connection hardware catalog number
- Clamps (Item "CLAMP") supplied separately from connection hardware catalog number
- Additional conductor hardware, such as armor rod, also supplied separately from connection hardware catalog number
- 30K rated hardware assemblies compatible with 25K and 30K insulators
- 50K rated hardware assemblies compatible with 50K insulators
- Insulator section contains all detailed specs and options
- Conductor Hardware section contains all detailed specs and options
- Connection hardware with "-S" suffix includes sphere nuts = corona free hardware

APPLICATION NOTES

Application Notes:

- All assemblies are customizable; If you can't find exactly what you need in the catalog, reach out to transmission@macleanpower.com for immediate support for your project
- Insulator (Item "INS") supplied separately from connection hardware catalog number
- Clamps (Item "CLAMP") supplied separately from connection hardware catalog number
- Additional conductor hardware, such as armor rod, also supplied separately from connection hardware catalog number
- 30K rated hardware assemblies compatible with 25K and 30K insulators
- 50K rated hardware assemblies compatible with 50K insulators
- Insulator section contains all detailed specs and options
- Conductor Hardware section contains all detailed specs and options
- Connection hardware with "-S" suffix includes sphere nuts = corona free hardware
- 150K rated hardware assemblies compatible with 50K or 80K insulators
 - 66K insulator strength acceptable for ceramics

TRANSMISSION ASSEMBLY INSULATORS

APPLICATION NOTES

Application Notes:

- Typical HV designs for use in transmission assemblies 69kV to 230kV
- Typical EHV designs for use in transmission assemblies 345kV to 500kV
- Assembly insulators are designed to match the dry arc distance of equivalent ceramic string insulators by voltage class
- Corona rings are required at 230kV and above, but may be added to any voltage application as required
- Corona rings are required at 345kV and 500kV
- For insulators that include corona rings, the published electrical values also include the corona ring

CORONA RINGS

Line post corona rings come in three standard sizes: 6", 12", and 17". They are designed for use on both our extruded and molded insulators. Below is a table showing the MPS recommendations for selecting the proper corona ring size for your application.

LINE POST CORONA RING GUIDE						
VOLTAGE	115kV	138kV	161kV	230kV	345kV	500kV
Designation Within Insulator Catalog Number	X	X	X	A	B	H
Line End	-	-	-	6"	12"	17"
Tower End	-	-	-	-	-	12"

Notes

- Corona rings are available for 115kV - 161kV if required by customer
- 2.5" line post not recommended for 500kV
- Adding a corona ring will reduce the dry arc distance roughly 1.5 – 3.0"
- The corona ring is represented in the insulator catalog number in the 11th digit
 - Example:
 - 2.5" extruded line post gain base / drop tongue insulator with no corona ring
 - H29010066AXSS025
 - 2.5" extruded line post gain base / drop tongue insulator with corona ring
 - H29010066AASS025

Features

- Unidirectional fit
- 2 piece captive collar
- Easy installation
- Hot stick workable

SUSPENSION CORONA RINGS

MPS Smart Fit Corona Rings come in three standard sizes: 8", 12", and 17". They are designed for use on both our extruded and molded insulators. Below is a table showing the MPS general guide for corona ring sizing.

SUSPENSION CORONA RING GUIDE								
VOLTAGE	115kV	138kV	161kV	230kV	345kV	345kV	500kV	765kV
Designation Within Insulator Catalog Number	X	X	X	A	B	G	V	H
Line End	-	-	-	8"	12"	12"	17"	17"
Tower End	-	-	-	-	-	8"	8"	12"

Notes

- Corona rings are available for 115kV - 161kV if required by customer
- Adding a corona ring will reduce the dry arc distance roughly 1.5 – 3.0"
- The corona ring is represented in the insulator catalog number in the 11th digit
 - Example:
 - 25 kip molded suspension y clevis / ball insulator with no corona ring
 - S14080050MXSS025
 - 25 kip molded suspension y clevis / ball insulator with 8" corona ring
 - S14080050MASS025

Features

- Unidirectional fit
- Connected to corona ball
- 2 piece captive keeper system
- Easy installation
- Hot stick workable

TRANSMISSION INSULATORS

BRACED POST

BRACED POST

Unique insulator design that combines the cantilever properties of a horizontal line post with the tension strength of a suspension insulator to make a high strength insulator assembly. The suspension insulator, or brace, is attached to the line post and to the tower via connection hardware. When loaded, the brace goes into tension and is the primary support mechanism for the assembly. The line post provides stability for transverse (tension & compression) & longitudinal loads exerted onto the assembly.

CONNECTION HARDWARE

The hardware used to connect the brace to the post and tower can be supplied in a variety of combinations. Typically, the hardware used is greater than or equal to the SML rating of the brace insulator, and the type of connection is determined by the end fittings supplied on the suspension. Options for connection hardware discussed in later sections.

VERTICAL LOAD

Downward load applied to the assembly, usually determined by the weight of the conductor.

TENSION LOAD

Transverse load pulling perpendicularly away from the tower, essentially putting the line post in tension.

COMPRESSION LOAD

Transverse load pulling perpendicularly into the tower, compressing the line post towards the tower.

LONGITUDINAL LOAD

Side load applied to the assembly. Ideally, the load on each side of the assembly will be equal / balanced, resulting in no longitudinal load. Longitudinal loading is critical when loads are unbalanced and for broken conductor consideration.

COMBINED LOAD CURVE

Load curve combines the effects of the various loads and plots working and ultimate strength of the assembly. Load curves are supplied upon request.

WORKING LOAD CURVE

The maximum load that can be applied to the insulator for long periods of time, without damaging or fatiguing the insulator.

BRACED POST LOAD APPLICATION

The maximum load (or worst-case load) of a specific application should fit right at or below the working load curve for that respective design. This max load is determined by the customer, and should consider environmental influences (wind, ice, etc.) along with the utility's safety factor practice. Max load applications that surpass the working curve require upgrades in strength for the braced post.

BRACED POST DESIGN ENHANCEMENTS

Depending on the specific loading requirements, there are many ways to upgrade the strength of a braced post, listed below are a few of the most common upgrades.

- Increase the SML of the brace insulator [~ increase vertical loading capability]
- Increase the rod diameter of the line post [~ higher vertical / transverse loading capability]
- Change from traditional gain base to high strength bolt circle [~ improves longitudinal loading capability]
- Eliminate the upsweep angle to horizontal post [~ improves compression loading capability]

Ideal LP Rod OD for BP Length
Viable BP Design, best to upsize LP Rod OD

Standard Strength Application:

- Horizontal post = 0° upsweep
- Base connection to tower
 - 5" bolt circle
 - 8"x10" flat base
 - Gain base 12" mount
- B2 w/ 25k brace SML
- B3 w/ 30k brace SML
- Post length: see table

High Strength Application:

- Horizontal post = 0° upsweep
- Base connection to tower
 - 5" bolt circle for B3
 - 7" bolt circle for B4
- B3 w/ 50k brace SML
- B4 w/ 50k brace SML
- High strength bracket / RAM
- Post length: see table

- Each phase-to-phase insulator will have stacked sheds on each end to be determined at time of order
- CR = corona rings
 - Generally added at 161kV and above
- 1 = insulator
- 2 = clamp

Link Style Pole Bands:

Link style pole bands provide an ideal product for guying and deadending to steel, wood or concrete poles (non-square) without the need for bolt holes in the pole. The bands will accommodate pole diameters from a minimum of 8" through a virtually unlimited pole diameter.

Features:

- Available at 15,000 lbs. and 30,000 lbs. tensile strength rating
- Supplied with up to 4 links with connecting eye used for terminating points to deadend and guy
- One "CLP" clip included - allows a 4" take up adjustment of band assembly
- Additional CLP can be ordered for added adjustment
- Full and half links are available to order for added adjustment

- Links - ductile iron, hot-dipped galvanized
- Hardware - steel, hot-dipped galvanized
- Cotter key - stainless steel

Application Notes:

- For use on wood, steel, and concrete poles
- No drilling of pole needed

Material:

- Aluminum alloy

Application Notes:

- For use with AAC, AAAC, ACAR, ACSR and ACSS conductors

Application Notes:

- Armor rods prevent damage to the conductor by increasing the stiffness of the conductor at support points, reducing abrasion, bending, and clamping stress on the conductor
- Armor rods are larger in diameter and longer than line guards
- The designs listed above have standard ball end finish. For parrot bill finish, add suffix "-EHV"

Material:

- Body & keeper - aluminum alloy
- Hardware - steel, hot-dipped galvanized
- Cotter pin - stainless steel

Fitting Notes:

- "N" suffix indicates no fitting
- Socket applications - connection to Insulator ball fittings
 - "-S" suffix for ANSI 52-3 / 52-5 socket eye fitting
 - "-S8" suffix for ANSI 52-8 / 52-11 socket eye fitting
- Clevis applications - connection to yoke plate / bracket
 - "-RYCI" suffix for y-clevis eye fitting
 - "-C" suffix for straight clevis eye fitting

Application Notes:

- Recommended torque on u-bolts:
 - 1/2" = 40-45 ft-lbs
- Can be used in high temperature applications if using armor rod (supplied separately)
- U-bolts are inverted / retained in place by neoprene grommets

Application Notes:

- ACFS clamps used on bare ACSR conductor
- No armor rod required
- U-bolts are inverted / retained in place by neoprene grommets
- Recommended torque on 1/2" u-bolts 40-45 ft-lbs
- Can be used in high temperature applications if using armor rod (supplied separately)

Material:

- Body & keeper - aluminum alloy
- Hardware - steel, hot-dipped galvanized
- Cotter pin - stainless steel

Ultimate Strength:

- VBLS – lower clamp 14,000 lbs., complete assembly 25,000 lbs.
- VBCF – lower clamp 25,000 lbs., complete assembly 36,000 lbs.
- VBACFS – lower clamp 25,000 lbs., complete assembly 36,000 lbs.
 - For 50,000 complete assembly, add suffix "FE" to catalog

Fitting Notes:

- "N" suffix indicates no fitting

Application Notes:

- Uses standard LS, CF, or ACFS clamps
- 12" bundle length, for assistance, contact transmission@macleanpower.com

Material:

- Body & keeper - aluminum alloy
- Hardware - steel, hot-dipped galvanized
- Cotter pin - stainless steel

Features:

- Aluminum keepers provide strong mechanical grip without damaging the conductor
- Combination of rubber inserts and aluminum keeper automatically accommodates thermal cycling, ensuring consistent hold during expansion and contraction
- Rubber inserts provide natural damping, minimizing Aeolian vibration and mechanical stress on the conductor

Fitting Notes:

- Socket applications – connection to Insulator ball fittings
 - "-S" suffix for ANSI 52-3 / 52-5 socket eye fitting
- Clevis applications – connection to yoke plate / bracket
 - "-RYCI" suffix for y-clevis eye fitting
 - "-C" suffix for straight clevis eye fitting
- Add "-BC" suffix for bolt, nut, and cotter key

Application Notes:

- Designed to withstand continuous operation with temperatures less than 250 deg. C
- Recommended torque on 1/2" Hex Bolts = 40 - 45 ft/lbs in an alternating sequence

Fitting Options:

- 52-3/5 socket = "-S"
- Rotated y-clevis eye = "-RYCI"
- Straight clevis eye fitting = "-C"

Conductor Notes:

- For use on AAAC, AAC, ACSR, compacted ACSR, ACSS, and ACSS/ TW
- For high temperature conductors such as ACSS, ACCR, etc., add "-HT" as a suffix to the catalog #

Application Notes:

- Designed for use on tangent applications and for line angles up to 30°
- Slip load is rated for 10-20% of conductor RBS
- Designs are for HV applications $\leq 230\text{kV}$
- 18" vertical bundle assembly also available (far right column)

Fitting Options:

- 52-3/5 socket = "-S"
- Rotated y-clevis eye = "-RYCI"
- Straight clevis eye fitting = "-C"

Conductor Notes:

- For use on AAAC, AAC, ACSR, compacted ACSR, ACSS, and ACSS/ TW
- For high temperature conductors such as ACSS, ACCR, etc., add "-HT" as a suffix to the catalog #

Application Notes:

- Designed for line angles between 30° - 60°
- Slip load is rated for 10-20% of conductor RBS
- Designs are for HV applications $\leq 230\text{kV}$

Material:

- Body & keeper - aluminum alloy
- Hardware - steel, hot-dipped galvanized
- Cotter pin - stainless steel

Fitting Notes:

- "N" suffix indicates no fitting
- Socket applications – connection to Insulator ball fittings
 - "-S" suffix for ANSI 52-3 / 52-5 socket eye fitting
 - "-S8" suffix for ANSI 52-8 / 52-11 socket eye fitting
- Clevis applications – connection to yoke plate bracket
 - "-C" suffix for straight clevis eye fitting
 - 90° clevis eye also available upon request

Application Notes:

- ADE clamps used on ACSR & ACAR conductor
- Add suffix "-SPH" for 345kV application (includes 2 sphere nuts)
- Add suffix "-SPH4" for 500kV application (includes 4 sphere nuts)
- Recommended torque:
 - 1/2" u-bolts = 40-45 ft-lbs
 - 5/8" u-bolts = 65-70 ft-lbs.
- For bolt, nut, and cotter, add suffix "-BC" to the catalog #
- Rated slip strength (RSS) is typically expressed as a percentage of the conductor's rated breaking strength (RBS), and it varies with cable size and stranding because these factors affect surface area, friction, and mechanical behavior under load
- Minimum slip strength of this clamp series is 40% rbs (partial tension)
- Minimum slip strength of this clamp series is 60% rbs (normal tension)

Quick Compress Features:

- Installs in 40% less time
- One-piece core grip
- Steel eye oriented and installed at the factory
- Factory pre-filled filler compound

Application Notes:

- Quick compress accessories are designed for a maximum conductor operating temperature of 100°C (212°F)

Application Notes:

- For applications exceeding 100°C (212°F) operating temperature, see the standard and HiTemp® compression accessories sections
- For use with ACSR, AAC, AAAC, and ACAR conductors
- Eye termination is shown in the vertical orientation (VES)
- For EHV finish, add "EHV" suffix to the catalog number
- Quick compress additional design options
- Double tongue [VED / HED]
- Adjustable eye – single tongue [AES]
- For additional design options and installation instructions - contact transmission@macleanpower.com

TRANSMISSION CONDUCTOR HARDWARE DEADEND CLAMPS

SDES - Solo HD Single Tongue Single
Die Compression Deadend

High Temperature Design for ACSR & ACSS Conductors: Max. Operating Temperature: 250°C

Item Notes:

- Eye deadend - steel eye fitting, felt washer, stainless steel core grip with aluminum lobes and insert sleeve
- Deadend body - aluminum barrel and tongue
- Terminal - aluminum body and steel hardware [terminal is factory filled with compound]

Application Notes:

- For use with ACSR, ACSS, ACSS/TW conductors
- Maximum operating / emergency temperature: 250°C
- Eye termination is set as default connection
- For EHV finish, add "EHV" suffix to the end of the catalog number - SDES-AS142HTEHV
- For compression DE less terminal, add "NT" suffix after "HT" - SDES-AS142HTNT
- Designed for full tension use, minimum of 95% of the ASTM rated strength of conductor
- For installation instructions - contact transmission@macleanpower.com

TRANSMISSION CONDUCTOR HARDWARE DEADEND CLAMPS

SDED - Solo HD Double Tongue Single
Die Compression Deadend

High Temperature Design for ACSR & ACSS Conductors: Max. Operating Temperature: 250°C

Item Notes:

- Eye deadend - steel eye fitting, felt washer, stainless steel core grip with aluminum lobes and insert sleeve
- Deadend body - aluminum barrel and tongue
- Terminal - aluminum body and steel hardware [terminal is factory filled with compound]

Application Notes:

- For use with ACSR, ACSS, ACSS/TW conductors
- Maximum operating / emergency temperature: 250°C
- Eye termination is set as default connection
- For EHV finish, add "EHV" suffix to the end of the catalog number - SDED-AS142HTEHV
- For compression DE less terminal, add "NT" suffix after "HT" - SDED-AS142HTNT
- Designed for full tension use, minimum of 95% of the ASTM rated strength of conductor
- For installation instructions - contact transmission@macleanpower.com

Material:

- Body - ductile iron, hot-dipped galvanized
- Keeper - aluminum alloy
- Hardware - steel, hot-dipped galvanized
- RIV suppressor spring - stainless steel

Features:

- Bolts contain captive lock washers
- Recommended for line angles up to 15°
- Recommended torque on keeper bolts: 20-25 ft-lbs
- RIV suppressor spring is installed on one of the trunnions

Application Notes:

- These clamps have a longer support radius for greater protection of the conductor. The keeper is reversible for a closer fit on the conductor
- For stainless steel hardware, add suffix "-SS" to catalog number
- For aluminum body, add suffix "-A" to catalog number
